

CLAIM (S)

What I claim as my invention is a convertible article useful as an outerwear and tote bag comprising of a double layer of material to form the back panel of the jacket of which the top layer has a mouth opening visible at the upper rear portion of the jacket, allowing said back panel to function as an oversized pocket, which when turned inside out, the entire jacket is received into the pocket transforming the outerwear garment into a tote bag.

The article in claim 1 further includes drawstrings that are threaded through the mouth of the said oversized pocket and are used as straps or handles when garment is converted to the tote bag function.
